ROYAL AHREND COMPANY

“Design is balance  
in relation  
to the human form”

Justus Kolberg, designer

The technology of the Dynamic Synchro mechanism stimulates sitting in a natural and dynamic way. It follows the changing posture of the body and offers support in every position, according to your height and weight. IAM chair will feel comfortable right away due to the well-matched proportions of the seat and back, as well as the properties of the flexible backrest.

### Direct comfort, optimum support and flexible elegance.

Flexible backrest moves along with the user's position. The seat slides through the back frame, which prevents a gap in the final position. The elegant lines give character to the design. Its technique is neatly integrated and therefore hidden to the eye.

IAM offers a number of clever options in addition to the standard adjustment layout. A cushion can be added to the lumbar support, for example, providing extra back support. And for those who require more counter pressure, we offer an inflatable lumbar support.
