instructions for use

Instructions for the use and maintenance of the Forum table range

The Forum table range is intended for furnishing administration workplaces. The design of this range takes account of anticipated and foreseeable modes of use and wear and tear in the office environment. Nevertheless, it is necessary follow certain instructions when using the Forum table range.

Description

The Forum table has a base and a wood-based table top. Cable management can be added using special plastic segments and textile slings with Velcro fastening.

Base

The base comprises two solid-wood legs and stretchers from closed steel profiles. The individual components are fastened with standard metric screws. The steel profiles are finished with a high-quality epoxy-polyester powder coating.

Table tops

The Forum table tops are made from 25 mm thick MFC with a 2mm thick ABS edge in a matching colour.

Principles of use

- the correct functioning of the table is dependent on its use in a suitable environment, i.e. standard office climate, along with humidity and dust content, and correct (not rough) handling;
- do not move sharp-edged objects across the table top;
- do not stand or sit on the table top;
- refrain from performing any activities on the table top that could result in its damage (e.g. cutting paper, repair work etc.);
- clean the surfaces with standard non-abrasive cleaning agents (we recommend standard detergents diluted with water), do not use any organic or inorganic solvents;
- lacquered parts can be treated with standard non-abrasive furniture polishes and waxes;
- the wood base can be wiped clean with a damp cloth and then dried. Standard furniture polish can be applied, but chemical cleaning agents should not be used;
- assembly and dismantling with subsequent assembly must be done by trained personnel only;
- the table should not be moved/carried by holding onto the table top;
- any spilt liquids should be wiped up immediately and the top dried.
