

Techo Platform

instructions for use

Instructions for the use and maintenance of PLATFORM

The PLATFORM desk system is designed for furnishing administrative workplaces (desks, meeting tables, furnishing study rooms and other similar rooms). When constructing this system, not only design and function but also other aspects were taken into consideration such as the various loads that it may be subject to during standard office use. In spite of this, it is necessary to adhere to some principles when using the PLATFORM desk system.

Description

The desk system is constructed as a combination of two materials – a metal base and chipboard table top. The metal frame is made of accurately welded steel profiles (legs, table top supports), which are assembled into a functional and stable unit with the aid of 4 aluminium beams. Individual desks can have optional integrated cable management according to requirements.

Metal base

The base is a welded construction made from closed steel profiles and components pressed from steel. Individual components are joined with connectors. The surface is finished with high-quality epoxy powder paint.

Desk top

The desk top for the PLATFORM system is made from 18 mm chipboard with a melamine laminate on both sides. The sides have a 2 mm thick plastic edging strip of the same colour finish.

Principles of use

- The correct functioning of the desk system is dependent on this product being placed in a suitable office environment – i.e. suitable humidity, no excessive dust content in air and the product being treated with reasonable care (i.e. no excessive force and mechanical damage);

- Do not stand or sit on desks or tables;
- Do not move objects with sharp edges across the desktop;
- Avoid using the table top for activities that could result in its damage (e.g. cutting paper, repair work);
- Any liquids spilt on the surface should be wiped up without delay and the table top should be dried.
- The metal base and desktop can be cleaned with standard non-abrasive detergents diluted with water. No organic or inorganic solvents should be used;
- Levelling of the table is performed using the levelling feet;
- We recommend performing occasional checks of the desktop level of workplaces and where necessary adjust the setting of the desk levels;
- Assembly and dismantling should only be performed by a trained person;
- The desk should not be moved by holding onto the desktop. Due to the weight of the base there is a risk that the desktop might pull away from the frame.
